

Scenario 3 — Premium Plan (\$33), \$221 Claim, Approved

This is the exact scenario given in the original request — and because it's the one used to build the address book and all worked values in Step-1 through Step-5, this document is simply an index into them rather than a repeat.

Values used (identical to the Step documents throughout)

	Value
Policyholder	Alice, 0x1111...aaaa
templateId	3 (Premium)
coverageAmount	10_000 ether
Premium paid	33 ether (\$33)
policyId assigned	1
Claim amount	221 ether (\$221)
claimId assigned	1
Oracle decision	Approved
Final payout	221 ether to Alice

Read in this order for the full trace

1. Step-1-Wallet-Auth.md — Alice connects and authenticates
2. Step-2-Buy-Policy-Premium-Payment.md — she buys the Premium plan, pays \$33
3. Step-3-File-Claim.md — she files the \$221 claim
4. Step-4-Oracle-Verification.md — it's verified and approved
5. Step-5-Payout.md — she receives \$221
6. Step-6-Whats-Not-Touched.md — where the \$221 in ClaimRegistry's balance actually came from beforehand

What makes this scenario the "baseline" the others deviate from

Every other scenario document in this set (1, 2, 4-8) explicitly states its deltas *from this one* — different plan, different claim size, different outcome, or a deliberately-triggered failure. If you've read this scenario via the Step documents, every other scenario document should be readable in under a minute each.
